

Sporty Shoes Testing Framework Documentation

The Sporty Shoes Testing Framework is designed to provide a comprehensive quality assurance (QA) and testing suite for the Sporty Shoes website. The framework incorporates various testing tools and libraries to ensure the reliability and functionality of the web application.

Project Components

1. apitestRestAssured Package

- ApiTests.java: Contains automated API tests using Rest-Assured.

2. cucumber Package

- apirunner.java: Cucumber test runner class.
- apistepdefinitions.java: Cucumber step definitions for API testing.
- api.feature: Cucumber feature file defining scenarios for API testing.

3. loadtest Package

- Sportyshoes Load Testing In JMeter.jmx: JMeter script for load testing the Sporty Shoes website.

4. postman Package

- ATE Capstone Project.postman_collection.json: Postman collection for API testing.

5. webTestSeleniumTestNg Package

- AddToCartPage.java: Page class for the "Add to Cart" functionality.
- AddtoCartPageTest.java: Test class for the "Add to Cart" functionality.
- HomePage.java: Page class for the Home page.
- HomePageTest.java: Test class for the Home page.
- LoginPage.java: Page class for the Login functionality.
- LoginPageTest.java: Test class for the Login functionality.
- OrderPage.java: Page class for the Order page.
- OrderpageTest.java: Test class for the Order page.
- RegisterPage.java: Page class for the Registration functionality.
- RegisterPageTest.java: Test class for the Registration functionality.
- TestBase.java: Base class for common test setup.

Testing Tools and Libraries

- Selenium WebDriver with TestNG: Used for end-to-end browser-based testing.
- Rest-Assured: Used for API testing.
- Cucumber: Used for behavior-driven development (BDD) and API testing.
- JMeter: Used for load testing.
- Postman: Used for API testing.
- Git and GitHub: Version control and collaboration.
- Eclipse IDE: Integrated Development Environment for Java.
- Maven: Project management and build tool.

When user performs PUT request to "/update-shoe" with parameters: # cucumber.apistepdefinitions.performPutRequest(java.lan
| id | 101 |
| image | image_url |
| name | SampleShoe |
| category | sports |
| sizes | 9 |
| price | 1000 |
Then the response status code should be 200 # cucumber.apistepdefinitions.verifyStatusCode(int)
